

Quality Insights of Delaware *A Regional Extension Center*

Quality Insights of Delaware has been awarded a \$5.8 million grant to establish a Health Information Technology Regional Extension Center (RECs) in Delaware. The grant funding will help physicians adopt and effectively use electronic medical records. During the next two years, the Center will assist 1,000 Delaware physicians with the adoption and meaningful use of health information technology (HIT).

In its role as a Regional Extension Center, Quality Insights will support health care providers with direct, individualized, and on-site technical assistance in:

- Selecting a certified EHR product that offers best value for the providers' needs;
- Achieving effective implementation of a certified EHR product;
- Enhancing clinical and administrative workflows to optimally leverage an EHR system's potential to improve quality and value of care, including patient experience as well as outcome of care; and
- Observing and complying with applicable legal, regulatory, professional, and ethical requirements to protect the integrity, privacy, and security of patients' health information.

The Health Information Technology Extension Program

The Extension Program established a network of Health Information Technology Regional Extension Centers (Regional Extension Centers) that will offer technical assistance, guidance, and information on best practices to support and accelerate health care providers' efforts to become meaningful users of EHRs.

The Regional Extension Centers will each serve a defined geographic area for coverage across the country. In total, the Regional Extension Centers will support at least 100,000 priority primary care providers (small practices and those serving safety-net populations), through participating non-profit organizations, in achieving meaningful use of EHRs and enabling nationwide health information exchange.

The Health Information Technology Extension Program - Continued

The Extension Program also established a national Health Information Technology Research Center (HITRC), funded separately, which will gather relevant information on effective practices from a wide variety of sources across the country and help the Regional Extension Centers collaborate with one another and with relevant stakeholders to identify and share best practices in EHR adoption, effective use, and provider support. The HITRC will build a virtual community of shared learning to advance best practices that support providers' adoption and meaningful use of EHRs.

HITECH Background

The Health Information Technology for Economic and Clinical Health (HITECH) Act of 2009 seeks to improve American health care delivery and patient care through an unprecedented investment in health information technology. The provisions of the HITECH Act are specifically designed to work together to provide the necessary assistance and technical support to providers, enable coordination and alignment within and among states, establish connectivity to the public health community in case of emergencies, and assure the workforce is properly trained and equipped to be meaningful users of EHRs. Combined these programs build the foundation for every American to benefit from an electronic health record, as part of a modernized, interconnected, and vastly improved system of care delivery.

The HITECH Act amends the Public Health Service Act by adding Section 3012, Health Information Technology Implementation Assistance. This section provides supportive services for the rest of the HITECH Act. Section 3012 (a) establishes the **Health Information Technology Extension Program (Extension Program)** which consists of both the Health Information Technology Regional Extension Centers (Regional Extension Centers) and the Health Information Technology Research Center (HITRC).

The HITECH Act also authorizes additional programs, initiatives, and regulations including those related to strengthening health information exchange, health IT innovation, the health IT workforce, Beacon communities, standards and certification, and the Medicare & Medicaid EHR incentive programs. Information on these initiatives can be found at <http://healthit.hhs.gov>.

Office of the National Coordinator for Health Information Technology

The Office of the National Coordinator for Health Information Technology (ONC), within the Department of Health and Human Services, is the principal federal entity working to improve health care quality, safety, and efficiency through the promotion of health information technology and electronic health information exchange.

Mission: A health system that uses information to empower individuals to improve the health of the population.

Vision: To improve health and health care for all Americans through use of information technology.
